

UTILITY MANAGEMENT

The Jackson Public School District endorses and commits to the conservation and management of energy and other utility resources. The District's utility management program has three goals.

1. Conserve utilities in a manner that can provide sustainability lessons for scholars, concomitant with saving nonrenewable resources of our planet;
2. Reduce the carbon footprint of the District to support the national goal of carbon neutrality;
3. Maintain a healthy, safe, and productive learning environment for scholars, teachers, and staff; and
4. Demonstrate fiscal responsibility by providing education at best value, while further investing savings from conservation efforts into other initiatives.

These goals are only successful if they become inculcated into daily behaviors and decision-making. All employees and scholars are encouraged to conserve utilities as part of providing the most sustainable environment for scholars today and in the future.
